Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/548,082

Applicant(s)

KOIZUMI ET AL.

Examiner

DAEHO D. SONG

Art Unit

2175

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 10 March 2009.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-28 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-28 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SF/ICE)
Paper No(s)/Mail Date _____
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date _____
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____

Applicant's Response

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 03/10/2009 has been entered.

In Applicant's Response to RCE dated 03/10/2009, Applicant amended Claims 1, 5, 10, 11 and 21, and argued against all objections and rejections previously set forth in the Office Action dated 11/10/2008.

In light of Applicant's amendments and remarks, the rejections of Claim 19 under 35 U.S.C. §101 are withdrawn.

In light of Applicant's amendments and remarks, the objection to the Specification is withdrawn.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-28 are rejected under 35 U.S.C. 102(b) as being **clearly** anticipated by Rumreich et al. (hereinafter Rumreich): U.S. Patent No. 5,929,927.

Rumreich **expressly** teaches:

Claim 1: A scroll display control device including a computer readable medium which stores a program for causing a computer to execute scroll-displaying, in synchronism with reproduction of series information correlated to text information, the corresponding text information on a text display screen, said scroll display control device comprising: means which changes a scroll speed in said text display screen on the basis of a text quantity of said corresponding text information with respect to reproduction time of said series information (col. 3 lines 37-48; col. 5 lines 1-10: changing a scroll speed in a text display screen according to text volume with respect to reproduction time of video/audio information), wherein the display area of said text is fixed at a predetermined reference position of the text display screen (col. 4 lines 63-67: the caption window or display area of text is fixed at a predetermined position of the text display screen).

Claim 2: A scroll display control device including a computer readable medium which stores a program for causing a computer to execute scroll-displaying, in synchronism

with reproduction of series information correlated to text information, the corresponding text information on a text display screen, said scroll display control device comprising: scroll speed calculation means which calculates a scroll speed on the basis of at least a time length of a series information section presently under reproduction and a quantity of the text belonging to a text section corresponding to the series information section during reproduction (col. 3 lines 37-48; col. 5 lines 1-10; col. 6 lines 38-60: calculating a scroll speed on the basis of a time period of video/audio information and an amount of text corresponding to the video/audio information during reproduction); and control means which scroll-displays the text belonging to the text section at a predetermined reference position of said text display screen according to said scroll speed (col. 4 lines 63-67: the caption window or display area of text is fixed at a predetermined position of the text display screen).

Claim 3. The scroll display control device according to claim 2, further comprising a text display setting information memory which variably stores display setting information of the text displayed on said text display screen; wherein said scroll speed calculation means calculates said scroll speed of the text on the basis of the length of the series information section during reproduction, the quantity of the text belonging to the text section corresponding to the series information section during reproduction, and the display setting information (col. 3 lines 37-48; col. 5 lines 1-10; col. 6 lines 38-60: calculating a scroll speed on the basis of a time period of video/audio information and an amount of text corresponding to the video/audio information during reproduction).

Claim 4. The scroll display control device according to claim 3, wherein said text display setting information memory variably stores a plurality of scroll methods and said control means scroll-displays the text according to the selected scroll method (col. 3 lines 37-48; col. 5 lines 1-10; col. 6 lines 38-60: storing various scroll rate and controlling scroll-displays according to the selected scroll rate).

Claim 5. The scroll display control device according to Claim 3, wherein said text display setting information memory variably stores a predetermined reference position of said text display screen (col. 4 lines 63-67: memory for the caption window or display area of text at a predetermined position).

Claim 6. The scroll display control device according to claim 3, further comprising user instruction input means for dynamically changing the text display setting information (col. 7 lines 25-54: caption insert for the text display).

Claim 7. The scroll display control device according to Claim 2 or Claim 5, wherein text of a preceding text section which precedes the text section and text of a succeeding text section which succeeds the text section are respectively displayed in two adjacent areas across the text section displayed at the reference position (col. 4 lines 44-48: displaying text with closed captioning standard EIA-608, having four rows of text at one

time reference among displayed 15 rows text that include succeeding text and preceding text).

Claim 8. The scroll display control device according to claim 2, further comprising a storage means which searchably stores the series information and the text information (fig. 3; col. 5 lines 14-67: a storage medium for storing text data and video/audio data).

Claim 9: The scroll display control device according to claim 2, wherein the series information and the text information corresponding thereto is acquired by accessing a server which provides the series information and the text information (figs. 3 and 5).

Claim 10. A scroll display control method comprising: displaying text information corresponding to sound in a scroll manner, such that the text information is displayed in synchronism with reproduction of the sound by changing a scroll speed adaptable to the sound during reproduction (col. 3 lines 37-48; col. 5 lines 1-10: displaying text information corresponding to sound of person's speaking in synchronism and changing the scroll speed in response to variations in the rate at which persons depicted in a screen speak).

wherein the display area of said text information is fixed at a predetermined reference position of a text display screen (col. 4 lines 63-67: the caption window or display area of text is fixed at a predetermined position of the text display screen).

Claim 11. A scroll display control method comprising: displaying and reading text information corresponding to a picture in synchronism with reproduction of the picture in a scrolling manner, and performing scroll display of said text information in synchronism with the reproduction of the picture by changing a scroll speed adaptable to the picture under reproduction (col. 3 lines 37-48; col. 5 lines 1-10: displaying and reading text information corresponding to a picture in synchronism with reproduction of the picture in a scrolling manner, and changing a scroll speed according to the picture under reproduction in synchronism with the text information), wherein the display area of said text information is fixed at a predetermined reference position of a text display screen (col. 4 lines 63-67: the caption window or display area of text is fixed at a predetermined position of the text display screen).

Claim 12. The scroll display control method according to claim 11, wherein the text information to be displayed is text information belonging to a text section corresponding to the picture during reproduction and to preceding and succeeding text sections thereof (col. 4 lines 45-67: displaying text information grid of 15 rows including preceding and succeeding text sections with 4 rows of caption window).

Claim 13. The scroll display control method according to claim 11, wherein when a text section corresponding to a picture reproduction position is changed, said scroll speed is derived on the basis of a time length of a picture section corresponding to the picture

reproduction position and a text quantity of the text section corresponding to the picture reproduction position (col. 6 lines 38-60: controlling the scroll speed by the time length of video information corresponding to the content of text information).

Claim 14. The scroll display control method according to claim 11 or claim 13, further including changing a text display setting of the text to be synchronously displayed with reproduction of the picture, and wherein, when the display setting of the text is changed, said scroll speed is derived on the basis of the changed display setting of the text (col. 5 lines 1-10; col. 6 lines 40-60).

Claim 15. The scroll display control method according to claim 14, wherein reproduction of the picture is one of still picture reproduction, n-time reproduction, n-time rewind reproduction, and slow reproduction, where n is an integer equal to or greater than 1 (figs. 1-2; col. 6 lines 40-60: video production functions).

Claim 16. The scroll display control method according to claim 15, wherein the text quantity of the text section is increased by changing the text display setting when reproduction of the picture is either fast-forward reproduction of at least two-time fast-forward reproduction or rewind reproduction (col. 5 lines 1-12: controlling speed in the rate of speech in video).

Claim 17. The scroll display control method according to claim 15, wherein the text

quantity of the text section succeeding the text section corresponding to the picture under reproduction is increased by changing the text display setting when reproduction of the picture is slow reproduction (col. 5 lines 1-12; col. 6 lines 40-60).

Claims 18 and 19:

The subject matter recited in Claims 18 and 19 corresponds to the subject matter recited in Claim 2. Thus Rumreich discloses every limitation of Claims 18 and 19, as indicated in the above rejections for Claim 2.

Claim 20. The scroll display control device according to Claim 1, wherein a reproduction time is a time length of said series information (col. 5 lines 1-10).

Claim 21. The scroll display control device according to Claim 1, wherein said scroll speed is increased if the text quantity increases with respect to said reproduction time and said scroll speed is decreased if the text quantity decreases with respect to said reproduction time (col. 5 lines 1-10; col. 6 lines 38-60).

Claim 22. The scroll display control method according to Claim 14, wherein the changing of the text display setting includes at least one of changing a display reference position of a target text, changing of a text display area size indicative of a height and a width of a text display area, and changing of a display text character size indicative of a height and a width of a text character (col. 6 lines 40-60).

Claims 23 and 24:

The subject matter recited in Claims 23 and 24 corresponds to the subject matter recited in Claim 22. Thus Rumreich discloses every limitation of Claims 23 and 24, as indicated in the above rejections for Claim 22.

Claim 25. The scroll display control device according to Claim 1, wherein the series information is image information or sound information (col. 5 lines 1-10).

Claim 26. The scroll display control device according to Claim 1, wherein the text quantity of said corresponding text information is an amount of text corresponding to the series information per unit time (col. 5 lines 1-10; col. 6 lines 38-60).

Claim 27. The scroll display control device according to Claim 1, wherein the text quantity of said corresponding text information is a total number of characters included within said corresponding text information (col. 5 lines 1-10; col. 6 lines 38-60).

Claim 28. The scroll display control device according to Claim 2, the quantity of the text belonging to the text section corresponding to the series information section is a total number of characters included within the text section (col. 5 lines 1-10; col. 6 lines 38-60).

Response to Arguments

3. Applicant's arguments against the rejections based on 35 U.S.C. 102 & 103 with respect to Claims 1-28 have been considered but are moot in view of the new grounds of rejection.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to DAEHO D. SONG whose telephone number is (571)272-7524. The examiner can normally be reached on Mon-Fri 7:30-5:00pm EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, William Bashore can be reached on 5712724088. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
